Muhammad Umar.

FLUTTER AND FULL-STACK DEVELOPER

ABOUT

I build mobile apps in Flutter and websites in React and Next.js. I look after the whole job: the screens, the database, payments, and getting the app into the App Store and Google Play. For about three years I have worked in a product team, on contract, at an app agency and as a freelancer. My latest work is My Invoice, an invoice and estimate app for US contractors, and Hudson Tasks, a tool for managing field staff. I have also built shopping apps for clients in Spain, a website for a car recovery company in Dubai and a community app for a business tower.

EXPERIENCE

Flutter Developer, DM Worx LLC, remote — Apr 2025 to present

- Building My Invoice, our main product (see Projects). I work across the Flutter app, the React web app and the admin dashboard.
- Added paid plans through App Store and Google Play purchases, and client payments through Stripe. Payments can be split into installments, and reminders go out by push and email.
- Built the AI assistant. A user describes a job in plain words and it drafts the estimate, using the OpenAI and Gemini APIs. The user can change the draft before saving.
- Built the admin dashboard that the team uses to run the product: users, subscriptions, payments, analytics, audit logs and support chat.
- Added Cloudflare Turnstile and Firebase App Check to sign-up and login to keep bots out.
- Built Hudson Tasks (hudsontasks.com) with React and Supabase. Employers assign tasks, follow hours with live shift timers and GPS, and manage finances and client follow-ups. It sends email alerts through SMTP.
- Set up a feature-based folder structure and code review in Git, so releases break less often.

Full-Stack Developer, contract, Cygnus Ventures, remote — Oct 2025 to Dec 2025

- Built features in a live codebase using React, TypeScript, Node.js and PostgreSQL. Every task was delivered on time.
- Designed and looked after the database tables on Supabase.
- Built admin pages and reports that cut down the manual checking operators had to do.

Flutter Developer, Solution Soul, Lahore — Jun 2024 to Feb 2025

- Built the screens of client Flutter apps from the design files.
- Connected Firebase Authentication so users could sign up and log in.
- Made layouts that fit different phone sizes on Android and iOS.
- Looked after the UI and UX of the apps, fixing layout problems and making design changes.

Flutter Developer Intern, Orbilon Technology, Lahore — Mar 2024 to Jun 2024

- Learned Flutter in a real team by building screens and reusable widgets, with senior developers reviewing my work.
- Learned Firebase and how to connect an app to an API, and practised state management with Provider and Riverpod.

PROJECTS

My Invoice

`Flutter, React, Firebase, Stripe, OpenAI, Gemini`

An invoice and estimate app for US contractors (myinvoice.us). It has a Flutter app for iOS and Android, a React web app and a separate admin dashboard, all on one Firebase backend. Users make estimates and invoices, get client approval, take Stripe payments in installments, and ask an AI assistant to draft an estimate.

Clika `Flutter, AWS Cognito, Stream Chat, Riverpod`	A community app for a business tower, live on Google Play. Members, companies and admins each have their own role. It has a marketplace, tower discounts, events, a directory of people and companies, and chat.
Olizon and MiPueblo `Flutter, Riverpod, Firebase Auth`	Two shopping apps for clients in Spain. Olizon covers sign-in, product pages, a cart, a step-by-step checkout and order tracking.
Emotion Controller `Flutter, Google ML Kit, Python, Gemini`	Started as my final year project. It reads mood from the camera, with face detection on the phone and a Python API, and from text through a Gemini chat. It then suggests quotes, videos and a list of trusted contacts to call.
Al Tayyab Recovery `HTML, CSS, JavaScript, Node.js`	English and Arabic website for a car recovery company in Dubai. It has call and WhatsApp buttons and a contact form that checks UAE phone numbers.
Junoon Herbals `Next.js, Supabase`	Online shop for a Pakistani brand, with an admin panel for products and orders. The owner can set up Meta Pixel without code and see live visitors by city and traffic source.
Realtors Lead `React, TypeScript, PayPal API`	Lead platform for US real estate agents. Agents pay by PayPal subscription and emails go out automatically.
Everpure Organics `React, TypeScript, Supabase`	Online shop with product filters, a cart with several price tiers, user accounts and a full admin dashboard.
My Madina `React, TypeScript, Supabase, PWA`	Map guide for pilgrims in English and Arabic that also works offline as a web app.
LinkedIn posting workflow `n8n, Groq, LinkedIn API`	A workflow that finds trending topics, writes posts with AI and publishes them to LinkedIn.

SKILLS

Mobile	Flutter, Dart, Riverpod, Provider, GetX, in-app purchases, App Store and Google Play release
Web	React, Next.js, TypeScript, JavaScript, Node.js, Tailwind CSS, progressive web apps
Data and backend	Firebase (Auth, Firestore, Cloud Functions, push), Supabase, PostgreSQL, AWS Cognito, REST APIs, SMTP
Payments and APIs	Stripe, PayPal, Google Maps, Stream Chat, OpenAI, Gemini, Google ML Kit
Security	Cloudflare Turnstile, Firebase App Check, reCAPTCHA, role-based access
Tools	Git and GitHub, CI/CD, Vercel, AWS, DigitalOcean, n8n

EDUCATION AND MORE

BS Computer Science
Lahore Garrison University, 2020 to 2024

Flutter Development Certification
NexSkills

Languages
English (professional), Urdu (native)

Campus Ambassador, Youth Speak Forum 2023
AIESEC
